

Psychiatric Genomics Consortium Wave 3 Schizophrenia GWAS Meta-analysis Summary Statistics Release

Authors: Schizophrenia Working group of the Psychiatric Genomics Consortium

Date: March 21, 2022

Version: v3

Disclaimer

All data here are released under a [Fort Lauderdale Agreement](#) for the benefit of the wider biomedical community for use in the investigation of the genetics of schizophrenia and wider genetics research. In addition to the general PGC stipulations for using results downloaded from this website, these data and results may not be used in attempts to identify individual study participants. You can freely browse and use the case-control results including deriving polygenic risk scores based on the results; however, we ask that you not publish global (genome-wide) analyses or meta-analyses incorporating these data, until after the associated manuscript from The Schizophrenia Working Group of the Psychiatric Genomics Consortium (Wave 3) has been published.

If you are uncertain whether your analysis may contravene this agreement, please email us at pgc.dac.scz@gmail.com.

General

This is the initial release of summary statistics from the wave 3 meta-analysis GWAS of schizophrenia in the Psychiatric Genomics Consortium. The analysis details are described in the Nature publication entitled “Mapping genomic loci implicates genes and synaptic biology in schizophrenia” and found at the following DOI:

<https://doi.org/10.1038/s41586-022-04434-5>.

There are several meta-analyses performed as a part of this work, and we have made the results available here. In brief, we have the **primary**, **core** and ancestry specific meta-analyses. The **core** meta-analysis consists of cohorts primarily of east asian and european ancestry. The **primary** includes the **core** cohorts, and additionally summary statistics from cohorts of african american and latino ancestry. Detailed descriptions of the analyses can be found in the manuscript.

Finally, these summary statistics are hosted on the RICOPILI website:
<https://data.broadinstitute.org/mpg/ricopili/> for generating specific region plots.

Files/Descriptions

PGC3_SCZ_wave3.primary.autosome.public.v3.tsv.gz

These are summary statistics from the **primary** meta-analysis analysis for autosomal SNPs.

PGC3_SCZ_wave3.primary.chrX.public.v3.tsv.gz

These are summary statistics from the **primary** meta-analysis analysis for chrX SNPs.

PGC3_SCZ_wave3.core.autosome.public.v3.tsv.gz

These are summary statistics from the **core** meta-analysis analysis for autosomal SNPs.

PGC3_SCZ_wave3.core.chrX.public.v3.tsv.gz

These are summary statistics from the **core** meta-analysis analysis for chrX SNPs.

PGC3_SCZ_wave3.asian.autosome.public.v3.tsv.gz

These are summary statistics from the meta-analysis of asian ancestry cohorts for autosomal SNPs.

PGC3_SCZ_wave3.latino.autosome.public.v3.tsv.gz

These are summary statistics from the meta-analysis of latino ancestry cohorts for autosomal SNPs.

[PGC3_SCZ_wave3.afam.autosome.public.v3.tsv.gz](#)

These are summary statistics from the meta-analysis of african american ancestry cohorts for autosomal SNPs.

[PGC3_SCZ_wave3.european.autosome.public.v3.tsv.gz](#)

These are summary statistics from the meta-analysis of european ancestry cohorts for autosomal SNPs.
